

# Instant Keywords Suggestion Tool

## Review

Hey Ashutosh,

The team has reviewed the tool and found it amazing with amazing speed and clean code. However there are some areas which you need to work on:

- We had suggested you to keep 100px space as sidebars for Desktop View. So, please shrink the body part and keep width as 16% (left space)+ 1.5% (white space) + 65% (body) + 1.5% (white space) + 16% (right sidebar).
- Make the search box smaller. It is too big. The height should be exactly like [google.com](https://www.google.com)'s search box and the placeholder should be "start typing".
- The logo of each search engine is too big. They should be half of their current size. The boxes (of each search engine) have extra space. Shrink them so that the blank space is removed. (I think by making body by 65%, most of the space will be automatically removed. However if there is still space in the boxes, shrink the them.)
- The search results of each engine should not exceed 20. Google shows 10. Make others show only 20.
- There is some issue with Amazon. It is showing Bing search queries. Please double check the script.

Please solve these issues and resend the script.
